

European Technical Assessment **ETA 13/0338** of 21/02/2025

I General Part

Technical Assessment Body issuing the ETA	Eurofins Expert Services Oy
Trade name of the construction product	Taizhou Homer Angle Bracket
Product family to which the construction product belongs	Three-dimensional nailing plates
Manufacturer	Jiangsu Homer Hardware Manufacturing Co., Ltd 516 Keji Road, The Economic Development Zone, Jiangyan District, CN-225500 Taizhou City, Jiangsu Province, China www.chinahomer.com
Manufacturing plant	Jiangsu Homer Hardware Manufacturing Co., Ltd 516 Keji Road, The Economic Development Zone, Jiangyan District, CN-225500 Taizhou City, Jiangsu Province, China
This European Technical Assessment contains	80 pages including 2 Annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with regulation (EU) No 305/2011, on the basis of	EAD 130186-00-0603 for Three-dimensional nailing plates
This ETA replaces	ETA 13/0338, issued on March 13, 2020

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full excepted the confidential Annex(es) referred to above. However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

II Specific Part

1 Technical description of the product

Taizhou Homer Angle Brackets are one-piece non-welded three-dimensional nailing plates manufactured from hot-dip zinc coated steel sheet of grade S250 GD Z 275 MA according to EN 10346 or SS GR340 Z275 according to ASTM A653M or from cold rolled austenitic stainless steel plate of grade 1.4301 or 1.4404 according to EN 10088-2 or AISI 304 (SS304) or AISI 316L (SS316) according to ASTM A240/A240M.

Figure 1. Examples of Taizhou Homer Angle Brackets. Flanges A and B marked.

In the zinc coated connectors, the yield strength R_{el} or R_{02} of the steel is at least 250 N/mm², the tensile strength R_m at least 330 N/mm² and elongation at failure A_{80} at least 19 %. Amount of the zinc coating is at least 275 g/m². In stainless steel connectors SS304, the yield strength R_{02} of the steel is at least 230 N/mm², the tensile strength R_m at least 520 N/mm² and the elongation at failure A_{80} at least 45 %. In stainless steel connectors 1.4301 / SS304, the yield strength R_{02} of the steel is at least 230 N/mm², the tensile strength R_m at least 520 N/mm² and the elongation at failure A_{80} at least 45 %. In stainless steel connectors 1.4404 / SS316, the yield strength R_{02} of the steel is at least 240 N/mm², the tensile strength R_m at least 530 N/mm² and the elongation at failure A_{80} at least 45 %.

The product drawings are in Annex 1 and the sizes of Taizhou Homer Angle Brackets are listed in tables of Annex 2. The steel material thickness of the zinc coated connectors is 2,00 ± 0,14 mm, 2,50 ± 0,16 mm or 3,00 ± 0,18 mm. The material thickness of stainless steel connectors is 2,00 ± 0,10 mm; 2,50 ± 0,12 mm or 3,00 ± 0,14 mm. Tolerance for the position of the holes is within ± 1,00 mm.

2 Specification of the intended uses in accordance with the applicable EAD

2.1 Intended uses

Intended use of Taizhou Homer Angle Brackets are timber constructions, where both flanges of the bracket are fixed to strength graded timber according to EN 14081-1, glulam according to EN 14080, softwood- or laminated logs, laminated veneer lumber (LVL) according to EN 14374, plywood according to EN 13986, cross laminated timber (CLT) with edge glued lamellas, or corresponding timber material. The characteristic density ρ_k of the timber shall not be greater than 500 kg/m³. This ETA does not cover angle brackets fixed in the end of a timber member or in the edge of a LVL member.

The forces to be transferred by the angle bracket shall act at the centre of the fastener group on the plane defined by flange A. For non-symmetric connections the flange A always means the bigger flange. For unclear cases the flange A is presented in figures of Appendix 1. Shear capacity represents the force component that is in effect in direction of a flange surface. Tensile and compression force are the force components that are in effect in direction perpendicular to a flange surface. The long adjustable hole brackets J-LAB-100 and J-LAB-130 are used typically for fixing non-settling construction members to a log wall and they may be loaded only by tension loads. The log bracket named J-LBJ-160 is a two-part connector used as a wind uplift restraint.

Taizhou Homer Angle Brackets shall be fixed to timber by anchor nails or anchor screws (see Figure 2) according to EN 14592. The diameter of the anchor nails shall be $d = 4,0$ mm and the profiled length at least 24 mm. The anchor screw shall have a conical head, the diameter of the smooth part of the screw shall be $d = 4,5 \dots 5,0$ mm and the inner diameter of the threaded part $d_1 \geq 3,0$ mm. The length of the threaded part of the screw shall be at least $6d$.

Figure 2. Fasteners: a) anchor nail and b) anchor screw.

Connections with Taizhou Homer Angle Brackets shall fulfil the minimum spacing and edge distance requirement specified in EN 1995-1-1. Timber parts shall not be pre-drilled for the nails or screws. Fasteners shall be perpendicular to the grain of the timber.

For Taizhou Homer Angle Brackets made of hot-dip zinc coated steel, the intended service classes according to EN 1995-1-1 are classes 1 and 2. Angle Brackets made of stainless steel can also be used in service class 3.

In service class 2, the nails or screws shall have an electroplated zinc coating according to EN ISO 2081 at least of type and thickness Fe/Zn 12c, or they shall be hot dip zinc coated according to EN ISO 1461, thickness at least 39 μ m. In service class 3, the nails or screws shall be made of stainless steel.

Figure 3. Typical use of Taizhou Homer Angle Brackets.

2.2 Working life

The provisions made in this European Technical Assessment are based on an assumed intended working life of the angle brackets of 50 years.¹

2.3 Identification

Taizhou Homer Angle Brackets are identified having "TAIZHOU HOMER" stamped on each connector.

3 Performance of the product and references to the methods used for its assessment

Table 1. Basic requirements for construction works and essential characteristics

Basic requirement and essential characteristics	Performance
BWR 1. Mechanical resistance and stability	
Joint strength	Clause 3.1
Joint stiffness	No performance assessed
Joint ductility	No performance assessed
Resistance to seismic actions	No performance assessed
Resistance to corrosion and deterioration	Clause 3.1
BWR 2. Safety in case of fire	
Reaction to fire	Clause 3.2
Resistance to fire	No performance assessed

3.1 Mechanical resistance and stability, BWR 1

3.1.1 Joint strength

Characteristic resistance values of Taizhou Homer Angle Brackets are given in Annex 2.

¹ This means that it is expected that when this working life has elapsed, the real working life may be, in normal use conditions, considerably longer without major degradation affecting the essential requirements of the works. The indications given as to the working life of a product cannot be interpreted as a guarantee given by the producer or the assessment body. They should only be regarded as a means for the specifiers to choose the appropriate criteria for products in relation to the expected, economically reasonable working life of the works.

3.1.2 Resistance to corrosion and deterioration

Taizhou Homer Angle Brackets have been assessed as having satisfactory durability and serviceability when used in timber structures when the timber species (including timbers preserved with organic solvent, boron diffusion and related preservatives) described in Eurocode 5 (EN 1995-1-1:2004) are used and the structures are subject to the dry, internal conditions defined by service classes 1 and 2. Angle Brackets manufactured from stainless steel can also be used in service class 3 provided that also the nails and screws used together with them are made of stainless steel.

3.2 Safety in case of fire, BWR 2

3.2.1 Reaction to fire

Taizhou Homer Angle Brackets are made of materials classified to have reaction to fire class A1 according to EN 13501-1.

4 **Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base**

According to the Decision 97/638/EC of the European Commission², the system of assessment and verification of constancy of performance (see Annex V to the regulation (EU) No 305/2011) is System 2+.

5 **Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD.**

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Eurofins Expert Services Oy prior to CE marking.

Issued in Espoo on February 21, 2025

ANNEX 1: Product details and definitions

ANNEX 2. CHARACTERISTIC LOAD-CARRYING CAPACITIES

Characteristic resistances for Taizhou Homer Angle Brackets - calculation method

Load carrying capacity of non-sliding Angle Bracket connections

The design resistance R_d of the angle bracket connection is

$$R_d = k_{\text{mod}} \frac{R_k}{\gamma_M} \quad (1)$$

where k_{mod} is the modification factor according to EN 1995-1-1 taking into account the effect of the duration of the load and moisture content for timber, γ_M is the partial factor for the resistance of connections according to the relevant National annex of EN 1995-1-1 and R_k is the characteristic resistance of the angle bracket connection.

When the connection made by the angle bracket is loaded by a shear force at the plane of flange A in the middle of the flange, it shall be checked that the conditions according to equations (2) to (4) are fulfilled

$$F_d \leq R_{A,d} \quad (2)$$

$$F_{x,d} \leq R_{B,x,d} \quad (3)$$

$$F_{z,d} \leq \begin{cases} R_{B,z,t,d} & \text{when the connection is in tension} \\ R_{B,z,c,d} & \text{when the connection is in compression} \end{cases} \quad (4)$$

where $F_{x,d}$ is the component in the direction of the bent edge of the angle bracket from the connection force F_d and $F_{z,d}$ is the component perpendicular to $F_{x,d}$ from the connection force F_d .

In addition, when the connection is stressed in tension, the following interaction equation shall be fulfilled:

$$\left(\frac{F_{z,d}}{R_{B,z,t,d}} \right)^2 + \left(\frac{F_{x,d}}{R_{B,x,d}} \right)^2 \leq 1 \quad (5)$$

Characteristic resistance

$$R_{A,k} = n_A F_{A,v,Rk} \quad (6)$$

where n_A is number of fasteners at flange A. $F_{A,v,Rk}$ is the characteristic lateral load-carrying capacity of the fastener in the timber part against flange A according to EN 1995-1-1, equation (7) for steel plate thickness t less than or equal to $d/2$ and (8) for thicker steel plates of thickness greater than or equal to d :

$$F_{v,Rk} = \min \begin{cases} 0,4 f_{h,k} t_1 d & \text{(a)} \\ 1,15 \sqrt{2 M_{y,Rk} f_{h,k} d} + \frac{F_{ax,Rk}}{4} & \text{(b)} \end{cases} \quad (7)$$

$$F_{v,Rk} = \min \begin{cases} f_{h,k} t_1 d & (a) \\ f_{h,k} t_1 d \left[\sqrt{2 + \frac{4M_{y,Rk}}{f_{h,k} d t_1^2}} - 1 \right] + \frac{F_{ax,Rk}}{4} & (b) \\ 2,3 \sqrt{M_{y,Rk} f_{h,k} d} + \frac{F_{ax,Rk}}{4} & (c) \end{cases} \quad (8)$$

where $t_1 = L - t$ when L is the length of the fastener, t is the thickness of steel plate, $M_{y,k}$ is according to standards EN 14592 and EN 409 experimentally determined characteristic value of the yield moment of the fastener, $F_{ax,Rk}$ is the withdrawal resistance of the fastener according to Eq. (10) limited at maximum to $1/3$ with nails and $1/2$ with screws from the load-carrying capacity $F_{v,Rk}$ and the characteristic value of the embedding strength

$$f_{h,k} = 0,082 \rho_k d^{-0,3} \quad \text{N/mm}^2 \quad (9)$$

The characteristic withdrawal resistance of the nail

$$F_{ax,Rk} = f_{ax,k} d t_{pen} \leq f_{tens,k} \quad (10a)$$

and for the screw

$$F_{ax,Rk} = n^{-0,1} f_{ax,k} d l_{ef} \left(\frac{\rho_k}{\rho_a} \right)^{0,8} \leq n^{-0,1} f_{tens,k} \quad (10b)$$

where $f_{ax,k}$ is the withdrawal parameter determined by testing according to standards EN 14592 and EN 1382 for the actual timber material with density ρ_a , $f_{tens,k}$ is the experimentally determined tensile resistance of the fastener together with a steel plate, t_{pen} is the penetration depth of the profiled part of the nail in timber, n is the number of the screws in the flange of connector, l_{ef} is the length of threaded part of the screw and ρ_k is the characteristic density of timber in the actual connection. If the penetration depth for an anchor nail is less than $t_{pen} \leq 8d = 32$ mm, the resistance according to Eq. (10a) is reduced by $(t_{pen}/8\text{mm} - 3)$.

Eq. (8) may be used for angular ring shank nails, if the length of the conical part is at least 4 mm and the diameter of the cone at the head of the nail is at least 5,2 mm. Otherwise linear interpolation of equations (7) and (8) is used for steel plate thicknesses between 2 and 4 mm.

Characteristic resistance

$$R_{B,x,k} = k_m F_{B,v,Rk} \quad (11)$$

where $F_{B,v,Rk}$ is the characteristic lateral load-carrying capacity of the fastener in the timber part against flange B, according to EN 1995-1-1, and the factor k_m depends on the placement of the fasteners. Values of k_m are given in Table A2.1 for cases, where fasteners are used in all holes of the angle bracket with diameter from 4 to 5 mm.

Characteristic tension resistance for angle brackets without stiffeners

$$R_{B,z,t,k} = \min \left\{ \begin{array}{ll} F_{n,1} + F_{n,2} - 3 \cdot \frac{F_{n,1} \cdot d_1 + F_{n,2} \cdot d_2 - \frac{B \cdot t_d^2}{4} \cdot f_y}{2L_B + d_2} & (a) \\ \frac{t_d^2 f_y}{4d_1} \cdot (B + B_{net,1}) & (b) \\ \frac{t_d^2 f_y}{4d_2} \cdot (B + B_{net,2}) + \frac{F_{n,1}(d_2 - d_1)}{d_2} & (c) \\ F_{n,1} + F_{n,2} & (d) \end{array} \right. \quad (12)$$

where

- d_1 distance between the bent edge and the hole row nearest to it in flange B ($i = 1$)
- d_2 distance between the bent edge and the hole row second nearest to it in flange B ($i = 2$)
- B the width of the angle bracket
- t_d is the thickness of the connector to be used in calculations (= the minimum thickness minus the thickness of the zinc coating)
- f_y yield strength of the steel of the angle bracket
- L_B the length of flange B from the middle of the bent edge
- $B_{net,i}$ the net width of the angle bracket at hole row i and

$$F_{n,i} = n_i F_{ax,Rk} \quad (13)$$

when n_i is the number of fasteners at row i and $F_{ax,Rk}$ is the characteristic resistance against withdrawal in the timber member against flange B according to EN 1995-1-1.

If there are fasteners only in one or two rows at flange B, equation (12.a) is inserted by $F_{n,2} = 0$ and $d_2 = d_1$ and equation (12.c) needs not to be checked.

Characteristic tension resistance for angle brackets with stiffener

$$R_{B,z,t,k} = \min \left\{ \begin{array}{ll} \Sigma F_{a,j} + F_{n,1} - 3 \cdot \frac{F_{n,1} \cdot d_1 - \frac{B \cdot t_d^2}{4} \cdot f_y}{2L_B - 2a + d_2} & (a) \\ \frac{t_d^2 f_y}{4(a + d_1)} \cdot (B + B_{net,1}) + \frac{\Sigma (F_{a,j}(a + d_1 - a_j))}{a + d_1} & (b) \\ \Sigma F_{a,j} + F_{n,1} & (c) \end{array} \right. \quad (14)$$

where

- d_1 distance between the end of the stiffener ridge and the hole row nearest to it in flange B ($i = 1$)
- a is the length of the stiffener ridge in flange B
- B the width of the angle bracket at the end of the stiffener ridge
- t_d is the thickness of the connector to be used in calculations (= the minimum thickness minus the thickness of the zinc coating)
- f_y yield strength of the steel of the connector
- L_B the length of flange B from the middle of the bent edge
- $B_{net,i}$ the net width of the angle bracket at hole row i
- $F_{n,1}$ is calculated from equation (13) where n_1 is the number of fasteners in the row nearest to the end of the stiffener ridge (i) and

$$F_{a,j} = n_j F_{ax,Rk} \quad (15)$$

when n_j is the number of fasteners at row j in the part of flange B with the stiffener ridge and $F_{ax,Rk}$ is the characteristic resistance against withdrawal in the timber member against flange B according to EN 1995-1-1.

If the flange B of the connector only has one row of fasteners on the part without stiffener ridge, in equation (14) is inserted $F_{n,1} = 0$.

Characteristic compression resistance for the angle brackets without stiffeners

$$R_{B,z,ck} = t_d \cdot \sqrt{3 \cdot B \cdot B_{net} \cdot f_y \cdot f_{c,90,k}} \quad (16)$$

where t_d , B , ja f_y are defined as for equation (12) and B_{net} is the smallest net width of the flange B and $f_{c,90,k}$ is the characteristic compression strength perpendicular to the timber member against flange B.

Characteristic compression resistance for the angle brackets with stiffeners

$$R_{z,c,B,k} = 3 \cdot a \cdot B_{ef} \cdot f_{c,90} + t_d \cdot \sqrt{3 \cdot B \cdot B_{net} \cdot f_y \cdot f_{c,90,k}} \quad (17)$$

where a is the length of the stiffener ridge from the bent edge of the angle bracket, B_{ef} is the width of the connector minus the width of the stiffener ridge and the other symbols as for equation (16).

Table A2.1. Article numbers of non-sliding Taizhou Homer Angle Brackets, nominal dimensions, number of fasteners in flange B n_B , eccentricity of the fastener group e , sum of the moment arms for the fastener group Σr_i and values for factor k_m when the fasteners are placed in every hole.

Load carrying capacity of Long Adjustable Brackets J-LAB-100 and J-LAB-130

In design of Long Adjustable Hole Brackets following condition shall be fulfilled

$$\left(\frac{F_{z,t,d}}{R_{B,z,t,d}} \right)^2 + \left(\frac{F_{y,t,d}}{R_{A,y,t,d}} \right)^2 \leq 1 \quad (18)$$

where $F_{z,t,d}$ is the design tension load perpendicular to flange B and $F_{y,t,d}$ is the design tension load perpendicular to the sliding flange A.

The design capacities are as follows

$$R_{B,z,t,d} = \min \left\{ \begin{array}{l} \frac{k_{mod}}{\gamma_M} \cdot R_{t,z,k} \\ \frac{k_{mod}}{\gamma_M} \cdot R_{v,z,k} \\ \frac{R_{b,z,k}}{\gamma_{M,1}} \end{array} \right. \quad (19)$$

$$R_{A,y,t,d} = \min \begin{cases} \frac{k_{mod}}{\gamma_M} \cdot R_{t,y,k} \\ \frac{k_{mod}}{\gamma_M} \cdot R_{v,y,k} \\ \frac{R_{f,y,k}}{\gamma_{M,1}} \end{cases} \quad (20)$$

where $\gamma_{M,1}$ is the partial safety factor in accordance with the relevant national annex of standard EN 1993-1-3, k_{mod} is the modification factor for load duration and moisture content according to EN 1995-1-1 and γ_M is the partial safety factor of connection in accordance with the relevant national annex of standard EN 1995-1-1.

The characteristic lateral load capacities of the fastener connections are as follows

$$R_{v,z,k} = F_{v,A,Rk} \quad (21)$$

$$R_{v,y,k} = 2F_{v,B,Rk} \quad (22)$$

where $F_{v,A,Rk}$ is the lateral load-carrying capacity per fastener in the sliding part and $F_{v,B,Rk}$ is similarly the load-carrying capacity per fastener in nailing plate side, see equations (7) and (8).

The characteristic capacities for J-LAB-100 connector are as follows:

$$R_{t,z,k} = \min \begin{cases} 1053F_{ax,B,Rk} + 242 \text{ N} \\ 4F_{ax,B,Rk} \end{cases} \quad (23)$$

$$R_{b,z,k} = 715 \text{ N} \quad (24)$$

$$R_{t,y,k} = \min \begin{cases} 0,2737F_{ax,A,Rk} + 218 \text{ N} \\ F_{ax,A,Rk} \end{cases} \quad (25)$$

$$R_{f,y,k} = 1080 \text{ N} \quad (26)$$

where $F_{ax,A,Rk}$ is the withdrawal capacity of the sliding fastener and $F_{ax,B,Rk}$ is the withdrawal capacity of nailing plate side fastener, see equations (10a) and (10b).

The characteristic capacities for J-LAB-130 are respectively:

$$R_{t,z,k} = \min \begin{cases} 1082F_{ax,B,Rk} + 317 \text{ N} \\ 4F_{ax,B,Rk} \end{cases} \quad (27)$$

$$R_{b,z,k} = 515 \text{ N} \quad (28)$$

$$R_{t,y,k} = \min \begin{cases} 0,2737F_{ax,A,Rk} + 283 \text{ N} \\ F_{ax,A,Rk} \end{cases} \quad (29)$$

$$R_{f,y,k} = 1350 \text{ N} \quad (30)$$

Load carrying capacity of Log Bracket J-LBJ-160

The design tensile capacity of the log bracket connector joint

$$R_{B,y,t,d} = \min \begin{cases} F_{b,Rk} \\ \gamma_{M,1} \\ \frac{k_{mod}}{\gamma_M} \cdot R_{t,k} \end{cases} \quad (31)$$

where $\gamma_{M,1}$ is the partial safety factor in accordance with the relevant national annex of standard EN 1993-1-3, $F_{b,Rk}$ characteristic buckling bending capacity of the sliding part, k_{mod} is the modification factor for load duration and moisture content according to EN 1995-1-1, γ_M is the partial safety factor of connection in accordance with the relevant national annex of standard EN 1995-1-1 and $R_{t,k}$ is the characteristic tension capacity of the angle bracket part.

Characteristic capacities are as follows

$$F_{b,Rk} = 1425 \text{ N} \quad (32)$$

$$R_{t,k} = \min \begin{cases} 1,227F_{ax,B,Rk} + 51 \text{ N} \\ 690 \text{ N} \\ 5F_{ax,B,Rk} \\ 4,05F_{v,A,Rk} \end{cases} \quad (33)$$

where $F_{ax,B,Rk}$ is the characteristic axial withdrawal capacity per fastener in the angular part to timber connection, see equations (10a) and (10b) and $F_{v,A,Rk}$ is the lateral load-carrying capacity of the fastener in the sliding timber part, see equations (7) and (8).

Structural requirements

Connections with the angle brackets shall fulfil the minimum spacing and edge and end distance requirements specified in EN 1995-1-1. The minimum distances a_1 and a_2 in table 8.2 of EN 1995-1-1 can be multiplied by a factor of 0,7 (nailed steel-to-timber connections).

If angle brackets are placed on both sides of the timber, the point of the fastener shall be at most $4d$ from the surface of the opposing side, where d is the nominal diameter of the fastener.

It is not possible to fill all holes by fasteners in all configurations and loading combinations of the angle brackets. In partial fixing the fasteners shall always be placed in the row nearest to the end of the flange and as near as possible to the bent edge of the angle bracket. Additionally, the fasteners should be positioned symmetrically.

The Long Adjustable Brackets and Log Brackets are always fixed from all the holes.

All fasteners in same flange shall be identical. The opposing flanges may have different fasteners.

Table A2.4. Characteristic tension resistance $R_{B,z,t,k}$ for Taizhou Homer Angle Brackets without stiffeners when anchor nails 4x50, $f_{ax,k} = 6 \text{ N/mm}^2$ and $t_{pen} = 34 \text{ mm}$, are used in all holes.
